Problem:

[Anderson Columbia Company, Inc. \(ACCI\)](#), one of the largest construction firms in the Southeast, needed to find high volume feeders to fit in a very small area. They knew that the nature of the need would make finding the right solution a challenge. The first company ACCI looked at simply didn't have a feeder that could meet their needs, and they found their bulky product to be rather pricy and too difficult to fit ACCI's small application. ACCI then looked at a second company that claimed they had a competitive product to offer, but the product they offered didn't quite match the volume characteristics ACCI was looking for.

Solution:

Finally, Eriez' name entered the mix as a potential solutions provider. ACCI knew Eriez' reputation for high quality feeding equipment. ACCI management soon connected with an Eriez trained sales representative who suggested the [High Volume Vibratory Feeder \(HVF\)](#), a rugged mechanical feeder capable of moving high volumes of bulk materials. Impressed with what they learned about Eriez' HVF, ACCI placed an order for five custom designed units.

Result:

ACCI has been extremely satisfied with the Eriez HV Feeders. ACCI uses the Eriez feeders to maintain a consistent and continuous feed rate to a crusher and screen. They set their five Eriez HV Feeders up the same to get each one of them to feed 750-800 tons an hour. ACCI was so pleased with the price and performance of their Eriez feeders, they turned to Eriez when they needed a suspended electromagnet. ACCI ultimately purchased an Eriez [SE-7535 Model Suspended Electromagnet](#).
